LangChain Framework

- [LangChain](#): the original 🦆
- [LangChain.js](#): the js brother ✨
- [Concepts](#): Langchain concepts doc
- [Twitter account](#): follow to get fresh updates
- [Youtube Channel](#)
- [Discord](#): discussion
- [Langchain Blog](#): The Official Langchain blog
- [LangChainHub](#): collection of all artifacts useful for working with LangChain primitives such as prompts, chains and agents
- [LangServe](#): LangServe helps developers deploy LangChain runnables and chains as a REST API.

Ports to other languages

List of non-official ports of LangChain to other languages.

- [Langchain Go](#): Golang Langchain
- [LangchainRb](#): Ruby Langchain
- [BoxCars](#): Ruby gem, Building applications with composability using Boxcars with LLM's. Inspired by LangChain.
- [LangTorch](#): Building composable LLM applications with Java / JVM. Inspired by LangChain.
- [LangChain4j](#): LangChain for Java
- [LangChainJSDotNet](#): Use the official LangChain.js library in .NET
- [LangChainDart](#): Build powerful LLM-based Dart/Flutter applications.

Tools

Low-code

- [Flowise](#): Drag & drop UI to build your customized LLM flow using LangchainJS
- [Langflow](#): LangFlow is a UI for LangChain
- [FlowTest](#): GenAI powered OpenSource IDE for API first workflows

Services

- [GPTCache](#): A Library for Creating Semantic Cache for LLM Queries
- [Gorilla](#): An API store for LLMs
- [LlamaHub](#): a library of data loaders for LLMs made by the community
- [EVAL](#): Elastic Versatile Agent with Langchain. will execute all your requests.
- [Auto-evaluator](#): a lightweight evaluation tool for question-answering using Langchain
- [Langchain visualizer](#): visualization and debugging tool for LangChain workflows
- [LLM Strategy](#): implementing the Strategy Pattern using LLMs
- [datasetGPT](#): A command-line interface to generate textual and conversational datasets with LLMs.
- [spellbook-forge](#): Make your LLM prompts executable and version controlled.
- [Auto Evaluator](#): Langchain auto evaluator
- [Jina](#): Langchain Apps on Production with Jina
- [Gradio Tools](#): Gradio 🍷 LLM Agents
- [steamship-langchain](#): adapters for Steamship, enabling LangChain developers to rapidly deploy their apps on Steamship 🦆
- [LangForge](#): A Toolkit for Creating and Deploying LangChain Apps
- [BentoChain](#): LangChain Deployment on BentoML
- [LangCorn](#): Serving LangChain apps automagically with FastApi
- [Langchain Service](#): Opinionated Langchain setup with Qdrant vector store and Kong gateway
- [Lanarky](#): 🚢 Ship production-ready LLM projects with FastAPI
- [Dify](#): One API for plugins and datasets, one interface for prompt engineering and visual operation, all for creating powerful AI applications.

- [LangchainJS Worker](#): LangchainJS worker on cloudflare
- [Chainlit](#): Build Python LLM apps in minutes ⚡
- [Psychic](#): Universal APIs for unstructured data. Sync documents from SaaS tools to a SQL or vector database, where they can be easily queried by AI applications like ChatGPT.
- [Zep](#): Zep: A long-term memory store for LLM / Chatbot applications
- [Langchain Decorators](#): a layer on the top of LangChain that provides syntactic sugar 🍷 for writing custom langchain prompts and chains
- [FastAPI + Chroma](#): An Example Plugin for ChatGPT, Utilizing FastAPI, LangChain and Chroma
- [AilingBot](#): Quickly integrate applications built on Langchain into IM such as Slack, WeChat Work, Feishu, DingTalk.
- [Llama2 Embedding Server](#): Llama2 Embeddings FastAPI Service using LangChain
- [ChatAbstractions](#): LangChain chat model abstractions for dynamic failover, load balancing, chaos engineering, and more!
- [MindSQL](#) - A python package for Txt-to-SQL with self hosting functionalities and RESTful APIs compatible with proprietary as well as open source LLM.
- [Pluto](#): Simplify deploying LangChain applications on AWS by allowing you to define and utilize necessary cloud resources directly in your application code, automatically creating the required infrastructure.
- [Llama-github](#): Llama-github is a python library which built with Langchain framework that helps you retrieve the most relevant code snippets, issues, and repository information from GitHub
- [CopilotKit](#): A framework for building custom AI Copilots 🤖 in-app AI chatbots, in-app AI Agents, & AI-powered Textareas

Agents

- [Private GPT](#): Interact privately with your documents using the power of GPT, 100% privately, no data leaks
- [ColossalAI Chat](#): implement LLM with RLHF, powered by the Colossal-AI project
- [AgentGPT](#): AI Agents with Langchain & OpenAI (Vercel / Nextjs)
- [Local GPT](#): Inspired on Private GPT with the GPT4ALL model replaced with the Vicuna-7B model and using the InstructorEmbeddings instead of LlamaEmbeddings
- [GPT Researcher](#): GPT Researcher is an autonomous agent designed for comprehensive online research on a variety of tasks.
- [ThinkGPT](#): Agent techniques to augment your LLM and push it beyond its limits
- [Camel-AutoGPT](#): role-playing approach for LLMs and auto-agents like BabyAGI & AutoGPT
- [RasaGPT](#): RasaGPT is the first headless LLM chatbot platform built on top of Rasa and Langchain.
- [SkyAGI](#): Emerging human-behavior simulation capability in LLM agents
- [PyCodeAGI](#): A small AGI experiment to generate a Python app given what app the user wants to build
- [BabyAGI UI](#): Make it easier to run and develop with babyagi in a web app, like a ChatGPT
- [SuperAgent](#): Deploy LLM Agents to production
- [Voyager](#): An Open-Ended Embodied Agent with Large Language Models
- [ix](#): Autonomous GPT-4 agent platform
- [DuetGPT](#): A conversational semi-autonomous developer assistant, AI pair programming without the copy-paste.
- [Multi-Modal LangChain agents in Production](#): Deploy LangChain Agents and connect them to Telegram
- [DemoGPT](#): DemoGPT enables you to create quick demos by just using prompt. It applies ToT approach on Langchain documentation tree.
- [SuperAGI](#): SuperAGI - A dev-first open source autonomous AI agent framework
- [Autonomous HR Chatbot](#): An autonomous agent that can answer HR related queries autonomously using the tools it has on hand
- [BlockAGI](#): BlockAGI conducts iterative, domain-specific research, and outputs detailed narrative reports to showcase its findings

- [waggle dance.ai](#): An opinionated, concurrent system of AI Agents. It implements Plan-Validate-Solve with data and tools for general goal-solving.
- [Elasticsearch Agent](#): Elasticsearch agent based on ElasticSearch, LangChain and GPT 4
- [CrewAI](#): Cutting-edge framework for orchestrating role-playing, autonomous AI agents.

Templates

- [AI](#): Vercel template to build AI-powered applications with React, Svelte, and Vue, first class support for LangChain
- [create-t3-turbo-ai](#): t3 based, Langchain-friendly boilerplate for building type-safe, full-stack, LLM-powered web apps with Nextjs and Prisma
- [LangChain.js LLM Template](#): LangChain LLM template that allows you to train your own custom AI LLM model.
- [Streamlit Template](#): template for how to deploy a LangChain on Streamlit
- [Codespaces Template](#): a Codespaces template for getting up-and-running with LangChain in seconds!
- [Gradio Template](#): template for how to deploy a LangChain on Gradio
- [AI Getting Started](#): A Javascript AI getting started stack for weekend projects, including image/text models, vector stores, auth, and deployment configs
- [Embedchain](#): Framework to easily create LLM powered bots over any dataset.

Platforms

- [Modal](#): End-to-end stack for cloud/ML compute
- [Metal](#): Metal is a managed service that allows you to build AI products without the hassle of managing infrastructure
- [Graphsignal](#): Observability for AI agents and LLM-powered applications. Trace, monitor and debug LangChain in production.
- [Mona](#): Live monitoring for your OpenAI usage
- [Openllmetry](#): Open-source observability for your LLM application, based on OpenTelemetry
- [MindsDB](#): Integrates with LangChain, enabling users to deploy, serve, and fine-tune models.

Open Source Projects

Knowledge Management

- [Quiver](#): Dump your brain into your GenerativeAI Vault
- [DocsGPT](#): GPT-powered chat for documentation search & assistance.
- [Chaindesk](#): The no-code platform for semantic search and documents retrieval
- [Knowledge GPT](#): Accurate answers and instant citations for your documents.
- [Knowledge](#): Knowledge is a tool for saving, searching, accessing, and exploring all of your favorite websites, documents and files.
- [Anything LLM](#): A full-stack application that turns any documents into an intelligent chatbot with a sleek UI and easier way to manage your workspaces.
- [DocNavigator](#): AI-powered chatbot builder that is designed to improve the user experience on product documentation/support websites
- [ChatFiles](#): Upload your document and then chat with it. Powered by GPT / Embedding / TS / NextJS.
- [DataChad](#): A streamlit app that lets you chat with any data source. Supporting both OpenAI and local mode with GPT4All.
- [Second Brain AI Agent](#): A streamlit app dialog with your second brain notes using OpenAI and ChromaDB locally.
- [examor](#): A website application that allows you to take exams based on your knowledge notes. Let you really remember what you have learned and written.
- [Reepochat](#): Chatbot assistant enabling GitHub repository interaction using LLMs with Retrieval Augmented Generation
- [SolidGPT](#): Chat everything with your code repository, ask repository level code questions, and discuss your requirements

Other / Chatbots

- [DB GPT](#): Interact your data and environment using the local GPT, no data leaks, 100% privately, 100% security
- [AudioGPT](#): Understanding and Generating Speech, Music, Sound, and Talking Head
- [Paper QA](#): LLM Chain for answering questions from documents with citations
- [Chat Langchain](#): locally hosted chatbot specifically focused on question answering over the LangChain documentation
- [Langchain Chat](#): another Next.js frontend for LangChain Chat.
- [Book GPT](#): drop a book, start asking question.
- [Chat LangchainJS](#): NextJS version of Chat Langchain
- [Doc Search](#): converse with book - Built with GPT-3
- [Fact Checker](#): fact-checking LLM outputs with langchain
- [MM ReAct](#): Multi Modal ReAct Design
- [QABot](#): Query local or remote files or databases with natural language queries powered by langchain and openai
- [GPT Automator](#): Your voice-controlled Mac assistant.
- [Teams LangchainJS](#): Demonstration of LangChainJS with Teams / Bot Framework bots
- [ChatGPT](#): ChatGPT & langchain example for node.js & Docker
- [FlowGPT](#): Generate diagram with AI
- [langchain-text-summarizer](#): A sample streamlit application summarizing text using LangChain
- [Langchain Chat Websocket](#): About LangChain LLM chat with streaming response over websockets
- [langchain_yt_tools](#): Langchain tools to search/extract/transcribe text transcripts of Youtube videos
- [SmartPilot](#): A Python program leveraging OpenAI's language models to generate, analyze, and select the best answer to a given question
- [Howdol](#): a helpful chatbot that can answer questions
- [MrsStax](#): QA Slack Bot
- [ThoughtSource](#) ⚡: A framework for the science of machine thinking
- [ChatGPT Langchain](#): ChatGPT clone using langchain on Huggingface
- [Chat Math Techniques](#): langchain chat with math techniques on Huggingface
- [Notion QA](#): Notion Question-Answering Bot
- [QNimGPT](#): Play Nim against an IBM Quantum Computer simulator or OpenAI GPT-3.5

- [ChatPDF](#): ChatGPT + Enterprise data with Azure OpenAI
- [Chat with Scanned Documents](#): A demo chatting with documents scanned with Dynamic Web TWAIN.
- [snowChat](#) ❄️: Chat with you're snowflake database
- [Airtable-QnA](#): 🌟 a question-answering tool for your Airtable content
- [WingmanAI](#): tool for interacting with real-time transcription of both system and microphone audio
- [TutorGPT](#): Dynamic few-shot metaprompting for the task of tutoring.
- [Cheshire Cat](#): Custom AGI boT with ready-to-use chat integration and plugins development platform.
- [Got Chaat Bot](#): Repo for creating GoT Chatbots (ex: talk with Tyrion Lannister)
- [Dialogbase](#): web application that allows you to create custom chatbots with your own knowledge base
- [CSV-AI](#) 🧠: CSV-AI is the ultimate app powered by LangChain that allows you to unlock hidden insights in your CSV files.
- [MindGeniusAI](#): Auto generate MindMap with ChatGPT
- [Robby-Chatbot](#): AI chatbot 🤖 for chat with CSV, PDF, TXT files 📄 and YTB videos 🎥 | using Langchain 🦜️ | OpenAI | Streamlit ⚡.
- [AI Chatbot](#): A full-featured, hackable Next.js AI chatbot built by Vercel Labs
- [Instrukt](#): A fully-fledged AI environment in the terminal. Build, test and instruct agents.
- [OpenChat](#): LLMs custom-chatbots console ⚡.
- [Twitter Agent](#): Scrape tweets, summarize them and chat with them in an interactive terminal.
- [GPT Migrate](#): Easily migrate your codebase from one framework or language to another.
- [Code Interpreter API](#): About Open source implementation of the ChatGPT Code Interpreter
- [Recommender](#): Create captivating email marketing campaigns tailored to your business needs
- [Autonomous HR Chatbot](#): An autonomous HR agent that can answer user queries using tools
- [Lobe Chat](#): An open-source, extensible (Function Calling), high-performance chatbot framework
- [Funcchain](#): write prompts, pythonic
- [PersonalityChatbot](#): Langchain chatbot for chat with personality using Langchain 🦜️ | LangSmith | MongoDB.
- [XAgent](#): An Autonomous LLM Agent for Complex Task Solving
- [InkChatGPT](#): A Simple document Retrieval-augmented generation (RAG) Chat app

- [MemFree](#) - Open Source Hybrid AI Search Engine, Instantly Get Accurate Answers from the Internet, Bookmarks, Notes, and Docs. Support One-Click Deployment.

Learn

Notebooks

- [Langchain Tutorials](#): overview and tutorial of the LangChain Library
- [LangChain Chinese Getting Started Guide](#): Chinese LangChain Tutorial for Beginners
- [Flan5 LLM](#): PDF QA using LangChain for chain of thought and multi-task instructions, Flan5 on HuggingFace
- [LangChain Handbook](#): Pinecone / James Briggs' LangChain handbook
- [Query the YouTube video transcripts](#): Query the YouTube video transcripts, returning timestamps as sources to legitimize the answers
- [IIm-lobbyist](#): Large Language Models as Corporate Lobbyists
- [Langchain Semantic Search](#): Search and indexing your own Google Drive Files using GPT3, LangChain, and Python
- [GPT Political Compass](#)
- [IIm-grovers-search-party](#): Leveraging Qiskit, OpenAI and LangChain to demonstrate Grover's algorithm
- [TextWorld ReAct Agent](#)
- [LangChain <> Wolfram Alpha](#)
- [BYO Knowledge Graph](#)
- [Large Language Models Course](#)

Videos Playlists

- [LangChain Series by Sam Witteveen](#)
- [LangChain Tutorials Playlist](#)
- [LangChain James Briggs' Playlist](#)
- [Greg Kamradt Playlist](#)

Other LLM Frameworks

- [Transformers Agents](#): Provides a natural language API on top of transformers
- [LlamaIndex](#): provides a central interface to connect your LLM's with external data.
- [Botpress](#): The building blocks for building chatbots
- [Haystack](#): NLP framework to interact with your data using Transformer models and LLMs
- [Semantic Kernel](#): Microsoft C# SDK to integrate cutting-edge LLM technology quickly and easily into your apps
- [Promptify](#): Prompt Engineering | Use GPT or other prompt based models to get structured output.
- [PromptSource](#): About Toolkit for creating, sharing and using natural language prompts.
- [Agent-LLM](#): An Artificial Intelligence Automation Platform.
- [LLM Agents](#): Build agents which are controlled by LLMs
- [MiniChain](#): A tiny library for coding with large language models.
- [Griptape](#): Python framework for AI workflows and pipelines with chain of thought reasoning, external tools, and memory.
- [llm-chain](#): is a powerful rust crate for building chains in LLMs allowing you to summarise text and complete complex tasks.
- [PromptFlow](#): Create executable flowcharts that link LLMs (Large Language Models), Prompts, Python functions, and conditional logic together.
- [OpenLM](#): a drop-in OpenAI-compatible library that can call LLMs from any other hosted inference API. Also [Typescript](#)
- [Dust](#): Design and Deploy Large Language Model Apps
- [e2b](#): Open-source platform for building & deploying virtual developers' agents
- [SuperAGI](#): A dev-first open source autonomous AI agent framework.
- [SmartGPT](#): A program that provides LLMs with the ability to complete complex tasks using plugins.
- [TermGPT](#): Giving LLMs like GPT-4 the ability to plan and execute terminal commands
- [ReLLM](#): Regular Expressions for Language Model Completions.
- [OpenDAN](#): open source Personal AI OS , which consolidates various AI modules in one place for your personal use.

- [OpenLLM](#): An open platform for operating large language models (LLMs) in production. Fine-tune, serve, deploy, and monitor any LLMs with ease using OpenLLM.
- [FlagAI](#): FlagAI (Fast LARge-scale General AI models) is a fast, easy-to-use and extensible toolkit for large-scale model.
- [AI.JSX](#): The AI Application Framework for Javascript
- [Outlines](#): Generative Model Programming (Python)
- [AI Utils](#): TypeScript-first library for building AI apps, chatbots, and agents.
- [MetaGPT](#): The Multi-Agent Meta Programming Framework: Given one line Requirement, return PRD, Design, Tasks, Repo and CI
- [Hyv](#): Probably the easiest way to use any AI Model in Node.js and create complex interactions with ease.
- [Autochain](#): Build lightweight, extensible, and testable LLM Agents with AutoChain.
- [TypeChat](#): TypeChat is a library that makes it easy to build natural language interfaces using types.
- [Marvin](#): ✨ Build AI interfaces that spark joy
- [LMQL](#): A programming language for large language models.
- [LLMFlow](#): Simple, Explicit and Transparent LLM Apps
- [Ax](#): A comprehensive AI framework for TypeScript
- [TextAI](#): 💡 All-in-one open-source embeddings database for semantic search, LLM orchestration and language model workflows.
- [AgentFlow](#): About Complex LLM Workflows from Simple JSON.
- [Outlines](#): Fast and reliable neural text generation.
- [SimpleAIChat](#): Python package for easily interfacing with chat apps, with robust features and minimal code complexity.
- [LLFn](#): A light-weight framework for creating applications using LLMs
- [LLMStack](#): No code platform for building LLM-powered applications with custom data.
- [Lagent](#): A lightweight framework for building LLM-based agents
- [Embedbase](#): The native Software 3.0 stack for building AI-powered applications.
- [Rivet](#): An IDE for creating complex AI agents and prompt chaining, and embedding it in your application.
- [Promptfoo](#): Test your prompts. Evaluate and compare LLM outputs, catch regressions, and improve prompt quality.
- [RestGPT](#): An LLM-based autonomous agent controlling real-world applications via RESTful APIs
- [LangStream](#): Framework for building and running event-driven LLM applications using no-code and Python (including LangChain-based) agents.

- [Magentic](#): Seamlessly integrate LLMs as Python functions
- [Autogen](#): Enable Next-Gen Large Language Model Applications.
- [AgentVerse](#) Provides a flexible framework that simplifies the process of building custom multi-agent environments for LLMs
- [Flappy](#): Production-Ready LLM Agent SDK for Every Developer
- [MemGPT](#): Teaching LLMs memory management for unbounded context
- [Agentlabs](#): Universal AI Agent Frontend. Build your backend we handle the rest.
- [axflow](#): The TypeScript framework for AI development
- [bondai](#): AI-powered assistant with a lightweight, versatile API for seamless integration into your own applications
- [Chidori](#): A reactive runtime for building durable AI agents
- [Langroid](#): an intuitive, lightweight, extensible and principled Python framework to easily build LLM-powered applications.
- [Langstream](#): Build robust LLM applications with true composability
- [Agency](#): 🧑 Library designed for developers eager to explore the potential of Large Language Models (LLMs) and other generative AI through a clean, effective, and Go-idiomatic approach
- [TaskWeaver](#): A code-first agent framework for seamlessly planning and executing data analytics tasks.
- [MicroAgent](#): Agents Capable of Self-Editing Their Prompts / Python Code
- [Casibase](#): Open-source AI LangChain-like RAG (Retrieval-Augmented Generation) knowledge database with web UI and Enterprise SSO ⚡, supports OpenAI, Azure, LLaMA, Google Gemini, HuggingFace, Claude, Grok, etc
- [Fructose](#): Fructose is a python package to create a dependable, strongly-typed interface around an LLM call.
- [R2R](#): A framework for rapid development and deployment of production-ready RAG systems
- [uAgents](#): A fast and lightweight framework for creating decentralized agents with ease.
- [CodeI](#): ✨ Fully autonomous AI Agent that can perform complicated tasks and projects using terminal, browser, and editor.
- [LLocalSearch](#): LLocalSearch is a completely locally running search aggregator using LLM Agents. The user can ask a question and the system will use a chain of LLMs to find the answer. The user can see the progress of the agents and the final answer. No OpenAI or Google API keys are needed.
- [Plandex](#): An AI coding engine for complex tasks

- [Maestro](#): A framework for Claude Opus to intelligently orchestrate subagents.
- [GPT Pilot](#): GPT Pilot is the core technology for the Pythagora VS Code extension that aims to provide the first real AI developer companion.
- [SWE Agent](#): SWE-agent takes a GitHub issue and tries to automatically fix it, using GPT-4, or your LM of choice.
- [Gateway](#): A Blazing Fast AI Gateway. Route to 100+ LLMs with 1 fast & friendly API.
- [AgentRun](#): The easiest, and fastest way to run AI-generated Python code safely
- [LLama Cpp Agent](#): The llama-cpp-agent framework is a tool designed for easy interaction with Large Language Models
- [FinRobot](#): An Open-Source AI Agent Platform for Financial Applications using LLMs
- [Groq Ruby](#): Groq Cloud runs LLM models fast and cheap. This is a convenience client library for Ruby.
- [AgentScope](#): Start building LLM-empowered multi-agent applications in an easier way.
- [Memary](#): Longterm Memory for Autonomous Agents.
- [Llmware](#): Providing enterprise-grade LLM-based development framework, tools, and fine-tuned models.
- [Pipecat](#): Open Source framework for voice and multimodal conversational AI.
- [Phidata](#): Build AI Assistants with memory, knowledge and tools.
- [Rigging](#): Lightweight LLM Interaction Framework (rust)
- [Nerve](#): Instrument any LLM to do actual stuff (rust)
- [Vision agent](#): Vision Agent is a library that helps you utilize agent frameworks to generate code to solve your vision task.
- [llama-agents](#): llama-agents is an async-first framework for building, iterating, and productionizing multi-agent systems, including multi-agent communication, distributed tool execution, human-in-the-loop, and more
- [Claude Engineer](#): Claude Engineer is an interactive command-line interface (CLI) that leverages the power of Anthropic's Claude-3.5-Sonnet model to assist with software development tasks.
- [AI Scientist](#): The AI Scientist: Towards Fully Automated Open-Ended Scientific
- [DSPy](#): The framework for programming—not prompting—foundation models

Complement to this list

- [Open LLMs](#): A list of open LLMs available for commercial use
- [Awesome LLM](#): Awesome-LLM: a curated list of Large Language Model resources.
- [LLaMA Cult and More](#): Keeping Track of Affordable LLMs, 🦙 Cult and More
- [Awesome Language Agents](#): List of language agents based on paper "Cognitive Architectures for Language Agents" : ⚡ Open-source LangChain-like AI knowledge database with web UI and Enterprise SSO ⚡, supports OpenAI, Azure, Google Gemini, HuggingFace, OpenRouter, ChatGLM and local models

Unmaintained

- [LangchainUI](#): The open source chat-ai toolkit
- [Yeager.ai](#): Yeager.ai Agent is the first Langchain Agent creator designed to help you build, prototype, and deploy AI-powered agents with ease

About Me

[Himanshu Ramchandani](#)

I am an AI Solution Consultant with 9 years of experience. I worked on over 100 Data & AI projects. I am the Founder of a Data & AI Solutions company. I focus on action-oriented learning in ML, DL, MLOps, Generative AI & System Design with implementation drills.

In the last decade, I have never stopped sharing my knowledge and have helped over 10000 leaders, professionals, and students.
